

Nacho Viejo

Engineering Manager

People Development · Product Ownership · Technical Direction · AI-Augmented Engineering

Profile

Engineering Manager with 26 years of experience building products, developing engineering teams and evolving engineering organizations. I help people grow and teams own the products they build, combining people development, product thinking and technical direction.

My earlier engineering work spans JavaScript, TypeScript, React, Node.js, Python and AWS. My recent focus has been people development, product delivery and technical direction, partnering with senior engineers on architecture and trade-offs. At Eventbrite, I led practical AI adoption across personal practice, team enablement and company governance, with clear human accountability.

Leadership Strengths

- Developed multidisciplinary teams of 6–15 engineers through feedback, performance management, career development, promotion support and mentoring.
- Partnered with Product, Design, Analytics, SRE and Platform to shape priorities, articulate trade-offs and coordinate sustainable delivery.
- Set engineering direction across architecture, quality strategy, reliability, security, accessibility and operational readiness.
- Built conditions for end-to-end product ownership, psychological safety, continuous learning and continuous simplification.
- Combined firsthand AI-assisted development, shared team tooling and learning, and governance design with engineering leadership and Security.

Experience

Eventbrite – Engineering Manager

January 2023 – June 2026 | Madrid, Spain

Led multidisciplinary teams of 6–15 engineers responsible for Eventbrite's Listings experience across web, mobile and backend services. Engineering Manager responsibilities began in August 2022; the formal title transition was in January 2023.

- Led the team through completion of the Listings migration: 100% of production traffic moved to the new application and legacy systems retired in early June against an October plan, maintaining scope and quality. Developed and progressively delegated technical leadership to a Staff Engineer.
- Built the team's capability in event-driven architecture across urgency signals, video processing and the internal Listings cache. Across the team's caching, compression, routing and operational improvements, outcomes included 90–99% cache hit rates, approximately 70% less CloudFront egress and approximately 30% lower daily infrastructure costs.
- Drove engineering strategy with Product, Design, SRE and Platform partners, balancing product delivery with quality and operational sustainability. Recommended pausing feature work to address a material Listings performance regression; the team restored the LCP baseline.
- Partnered with Product and Analytics to deliver multi-ticket selection, generating approximately 378,000 incremental orders annually; led repeating-event improvements that increased indexed Listings pages by 23%.
- Directed phased and blue-green rollouts for critical services, including observability, resilience, security, performance, accessibility and incident readiness.
- Owned hiring decisions for my team jointly with HR and helped standardize engineering interview calibration in 2023.
- Developed engineers and engineering managers through feedback, performance management, career development and promotion support, including an Engineer II-to-Senior promotion and mentoring Staff Engineers exploring management.
- **Individual practice:** Returned to hands-on contribution gradually, from bugs to more critical work, to evaluate AI tools, delegation boundaries and security guardrails firsthand.
- **Team adoption:** Built and evolved a shared engineering harness, transferred learning through workshops including Google Agent Development Kit, and led an operational-excellence hackathon; several specialized agents continued supporting weekly data gathering and triage.
- **Company governance:** Worked with the CTO, VP of Engineering and a Principal in Security on AI governance design, responsible-use boundaries and cross-team reuse.

Eventbrite – Staff Software Engineer

March 2019 – March 2023 | Madrid, Spain

The final months overlapped with the transition into Engineering Management.

- Provided technical leadership across Checkout and Listings, shaping architecture and engineering practices for React, TypeScript, Node.js, testing and distributed systems.
- Led customer-facing initiatives across multiple squads, translating product goals into technical direction, delivery plans and coordinated rollouts.
- Designed quality-engineering strategies that expanded scalable end-to-end testing and supported more autonomous delivery.
- Mentored engineers, reviewed technical designs, removed blockers and balanced immediate delivery with system quality.

Earlier Product and Engineering Experience

Eventbrite — Senior Software Engineer | April 2018–March 2019: unified Checkout development, React and TypeScript, and early end-to-end testing practices adopted across teams.

TheMotion — Senior Software Engineer | 2016–2018: Python backend services, frontend applications and media-processing pipelines for ecommerce video generation.

Civitatis — Senior UI Engineer | 2015–2016: mobile-web modernization, CI/CD and automated-testing workflows, reservation back office and customer-facing product delivery.

TAPTAP Networks — Software Engineer | 2014–2015: Node.js, Express, reporting products, geospatial interfaces and data visualization.

Indra — Senior Interface Engineer / Frontend Lead | 2005–2014: frontend leadership for telecommunications, banking, government, energy and air-traffic-control systems.

Technical and Operating Practice

- **Leadership:** engineering management, coaching, performance management, career development, hiring, team effectiveness and product partnership.
- **Architecture and operations:** distributed and event-driven systems, frontend and backend architecture, CI/CD, observability, operational resilience and SRE collaboration.
- **Application development:** TypeScript, JavaScript, Node.js, React, Next.js and Python.
- **AI-augmented engineering:** AI-assisted development, context and harness engineering, coding agents, MCP ecosystems, spec-driven workflows, team enablement and responsible-use governance.
- **Cloud and quality:** AWS, DynamoDB, CloudFront, Step Functions, end-to-end testing, Playwright, Cypress, SAST and SCA.

Education and Professional Development

- Computer Engineering (Systems), Universidad de Oviedo, 1991–1996
- Higher Technical Diploma in Graphic Design and Advertising, Escuela de Arte de Oviedo, 1998–2000
- Management Accelerator Program, McKinsey & Company, 2024
- Certified ScrumMaster, 2011
- MongoDB for Node.js Developers, 2014

Languages

- Spanish: native
- English: fluent; everyday working language for eight years at Eventbrite; English qualification from Escuela Oficial de Idiomas de Oviedo
